

SOUND PROJECTS

Spyshot

The audience did not see them but certainly felt them kick !

Beta models of Sound Projects self powered SP221 subs were neatly tucked away under the large stage area. These double 21 inch systems were put to an ultimate endurance and stress test at the Intens Fusion harder styles dance event. For more impressions go to:

<http://www.youtube.com/watch?v=beofsXrFT2A>

The demanding environment of this festival was an ideal opportunity to compare maximum impact- as well as the enhancement function with the abundant SP18 and SP4-15 sub cabinets.

As a main F.O.H. two x 9 Linex rigs and twelve SP2-10 bass horns were flown endorsed by ample SPL90T in and out fills. System design and installation was taken care of by Kooijmans audio verhuur.

Soon we shall be able to tell you more and start delivery of the SP221 subs early next year.
